

prompt: start with 481; 10 ops

After step 4 the value is 390.

After step 5 the value is 457.

edited: true value was 452

After step 6 the value is ...

final answer

1 text edit: change the written value
and let the model continue

2 state patch: plant a never-written
value in the state at that token

3 attention block: cut attention from
later positions to that token

measure: does the final answer
follow the planted value?
