

- 1 Edit the visible text of one step:
the correct value $c = 452$ becomes $e = 457$

- 3 Block later positions from
attending to the value token

prompt:
start 481,
10 ops

After step 4
the value is 390.

After step 5
the value is 457.

model continues
steps 6..10

final
answer

hidden state at '457'
is replaced by the state
of $p = 462$, never written

- 2 Overwrite the hidden state;
the visible text is unchanged

Readout: does the final answer
build on the planted value?
